-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 13-15, 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 13 recites the limitation "a lock ring" and "an inner surface" in line 6 and "a neck ring" and "a lower surface structure" in line 11. These elements have been previously defined in the claim.
4. Claim 18 is dependent from a cancelled claim. Claim 18 is being examined as being dependent from claim 16

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 3-7, 11, 13, 16, 18-20, 22 and 23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Von Holdt Pat. No 4,570,897.
7. Von Holdt discloses a lock ring (42) lifting the perform in a first lifting operation (Fig. 5a), and configured to separate from the neck ring (38) during a second lifting operation (Fig. 5b), and the neck ring moves in a direction transverse to the lifting direction after the second lifting operation has begun (Fig. 5c). An upper surface of the

lock ring (42) is sealed and aligned with a complementary surface on a neck ring (38) as shown in Fig. 6.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 2, 8-10, 12, 14, 15, 21 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Von Holdt Pat. No 4,570,897 taken together with Von Holdt Pat. No. 4,632,357.

10. As to claim 2, the lifting surface contacting 50% of a sealing surface of the lower portion of the molded article would have been obvious in Von Holdt '357 depending upon the size of the flange which a smaller diameter flange would be capable of being lifted from the core. As to claim 8, the period of time is not taught in Von Holdt.

However, the distances are clearly shown in the figures. It would have been obvious that the time for lifting the in the first period would be less than the second period of time since the distance and time moved would depend upon the configuration of the flanges so as to remove the structures 42, 38, 32 from the flanges, see flanges 12 of Von Holdt '357. The piston and connecting rod being a unified structure would have been obvious since these structures must be designed to be united to the movable structures 42 and

32. The neck ring being two halves rather than four portions would have been obvious depending upon the size of the flanges and their complexity.
